

eDiscovery Evolution

HaystackID Continues To Adopt New Tactics

Litigation support continues to evolve to meet the needs of changing technology, forcing the industry to adopt new methodologies to capture advanced formats of information. Today, for example, a standard web page is among the most challenging formats since it's typically filled with embedded media, links to other pages, and assorted features.

Background: *Web pages pose today's biggest challenge.* Almost any web page is far more dynamic than standard electronic documents that can be easily printed or converted into a usable image. Many sites include semi-proprietary or copy-prevention technologies that further complicate the collection of web pages. In rare cases, it can be impossible for technicians to capture the site as the user requires.

HaystackID Responds: *Customized application makes the difference.* HaystackID's team of operators and project managers are particularly familiar with this process and work with our own customized program to accurately and efficiently accomplish related jobs. This application downloads any web pages and repeats the process of building a list of hyperlinks on each downloaded page until all pages on the website have been downloaded.

Solution: *Breaking out the elements of each page.* HaystackID's customized process completes the task in a highly structured fashion. It pulls down each file along with HTML, style sheets, external JavaScript and images that are put into their own folders. These files are then put into a program that pre-processes the HTML files into PDFs, integrating all various files into a single location.

We also have custom-designed a combination of various applications known as "web-spiders" that point to the main page of a given website and builds a list of links to all other pages. The project management team then reviews the contents of the converted site for logical duplicates, being careful not to eliminate files hosted on the site.

Outcome: *New solutions to remain at the forefront of technology.* HaystackID has invested a great deal of time and resources necessary to perfect the process of quickly and efficiently capturing webpages requested by our clients. Because of our deep level of understanding and commitment to innovative solutions, HaystackID today is the premiere vendor for litigation support, regardless of the complexity or novelty of given tasks.
