RelativityOne: The Best Cloud Option

An Overview of HaystackID's RelativityOne® Service Offering

HAYSTACK

The Benefits of RelativityOne

RelativityOne offers a better way to address your eDiscovery challenges by providing all the functionality you need in a secure SaaS solution. RelativityOne gives you the scalability, redundancy, and international reach of the Microsoft Azure cloud, as well as the massive amount of resources Microsoft puts into innovating and securing their cloud platform.

However, RelativityOne is uniquely built and architected for SaaS, so you can achieve even more with a solution that takes full advantage of the cloud and the full investment that Relativity puts into creating, securing, and innovating a true SaaS product.

Not all cloud deployments are the same. RelativityOne was architected and designed with unique benefits that you won't get from deploying Relativity to the cloud on your own or through another cloud deployment.

Cutting-edge security

We take every precaution to protect your data. RelativityOne has a comprehensive, proactive, and intel-driven security posture that extends from software development to deployment and operations.

- Relativity's cyber security team provides cutting-edge defense with decades of experience to anticipate threats, mitigate risks, and stay ahead of adversaries.
- Security is ingrained in the way we develop RelativityOne. Our entire software development lifecycle is built around ensuring that we are delivering a secure product, secure code, and secure updates that are free of vulnerabilities.
- Security is built into the foundation of RelativityOne. We ensure that your data is safeguarded by adhering to strict internal compliance standards for managing information security and risk.

Scalability

Don't worry about scaling your system's performance during peak times—it's all covered by RelativityOne. RelativityOne provides elastic storage and compute resources that automatically scale to your needs in real time with Aspera high-speed transfer technology to quickly, seamlessly, and securely upload your data.

Preview and Sandbox

Prepare for the latest RelativityOne functionality with Preview and Sandbox. With early access to new features, you can extend and differentiate your offering and test your innovations prior to upgrade without interrupting your production environments.

Backups and disaster recovery

With RelativityOne, you don't have to worry about backups and failovers or the tradeoffs between cost and downtime. We handle everything for you—automatically—increasing uptime and availability with no performance degradation.

Monitoring and incident management

With 24/7 monitoring, RelativityOne tracks detailed logs so we can respond to and learn from operational changes, avoid incidents, and improve performance and reliability.

Immediate access to innovation

Don't worry about spending time and resources on upgrades to improve your offering. RelativityOne is always up to date so you can take advantage of the latest innovations and enhancements to security and performance that you otherwise wouldn't have access to for months.

Infrastructure-free

The greatest benefit of working with a SaaS solution? You don't have to spend your own time and resources on maintaining an infrastructure or worrying about scaling your storage. Everything is straightforward and built right in.

Conclusion

RelativityOne is the industry-leading SaaS offering you need to conduct eDiscovery in the cloud. It gives you the security, performance, and flexibility that you would expect from a native SaaS application—far more than you'd get by deploying Relativity on-premises in the cloud. Take the headache out of eDiscovery and leave the heavy lifting to us, so you can focus on what matters: growing and differentiating your business.
