# Agenda

- Introduction
- Service Back-Drop
- Onboarding and Logistics
- New Normal for Security and Confidentiality
- Remote Team/Client Management and Collaboration
- Data Privacy, Compliance and Risk Management
- The Future After COVID-19

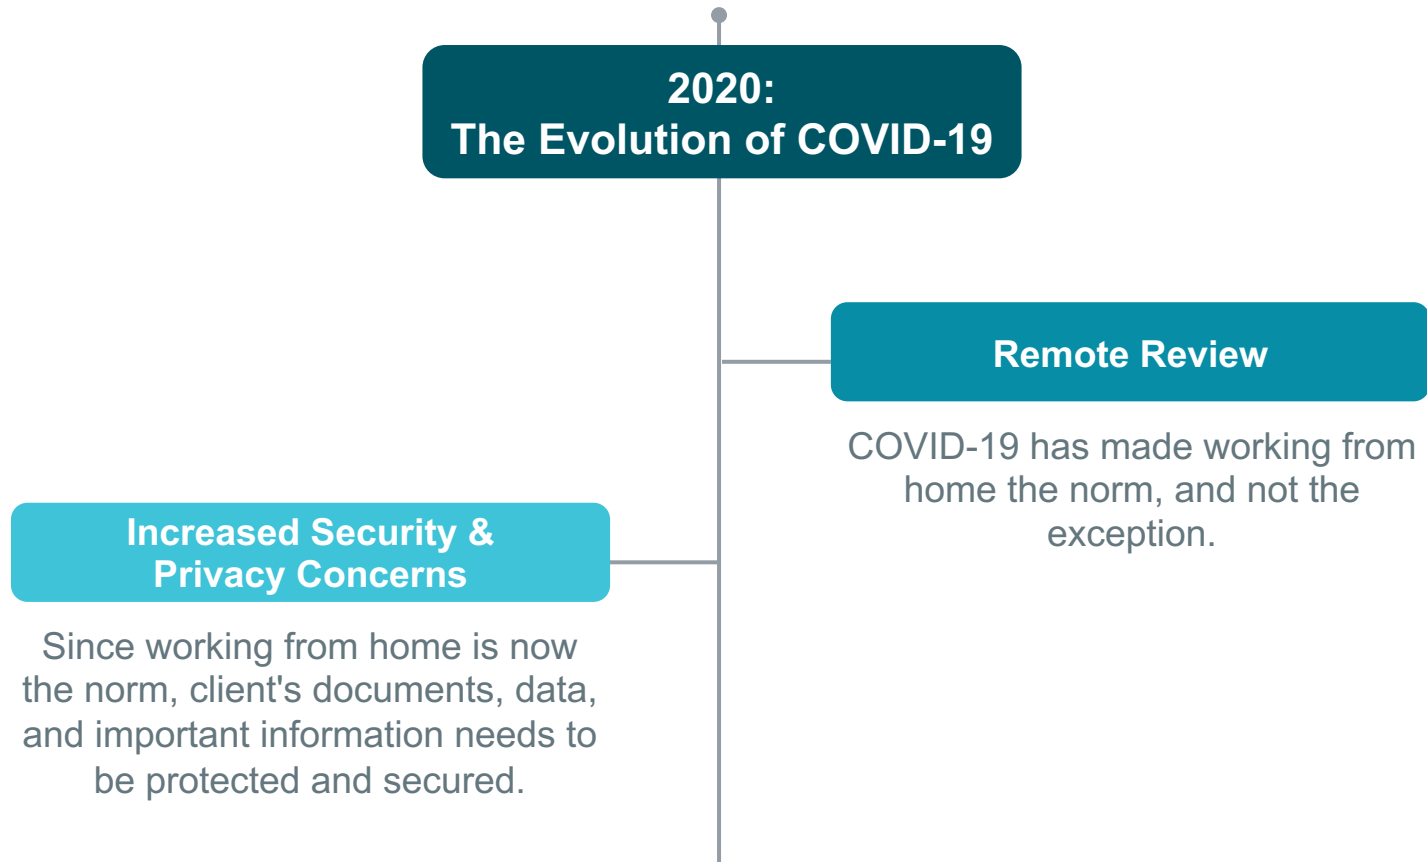

# Introduction

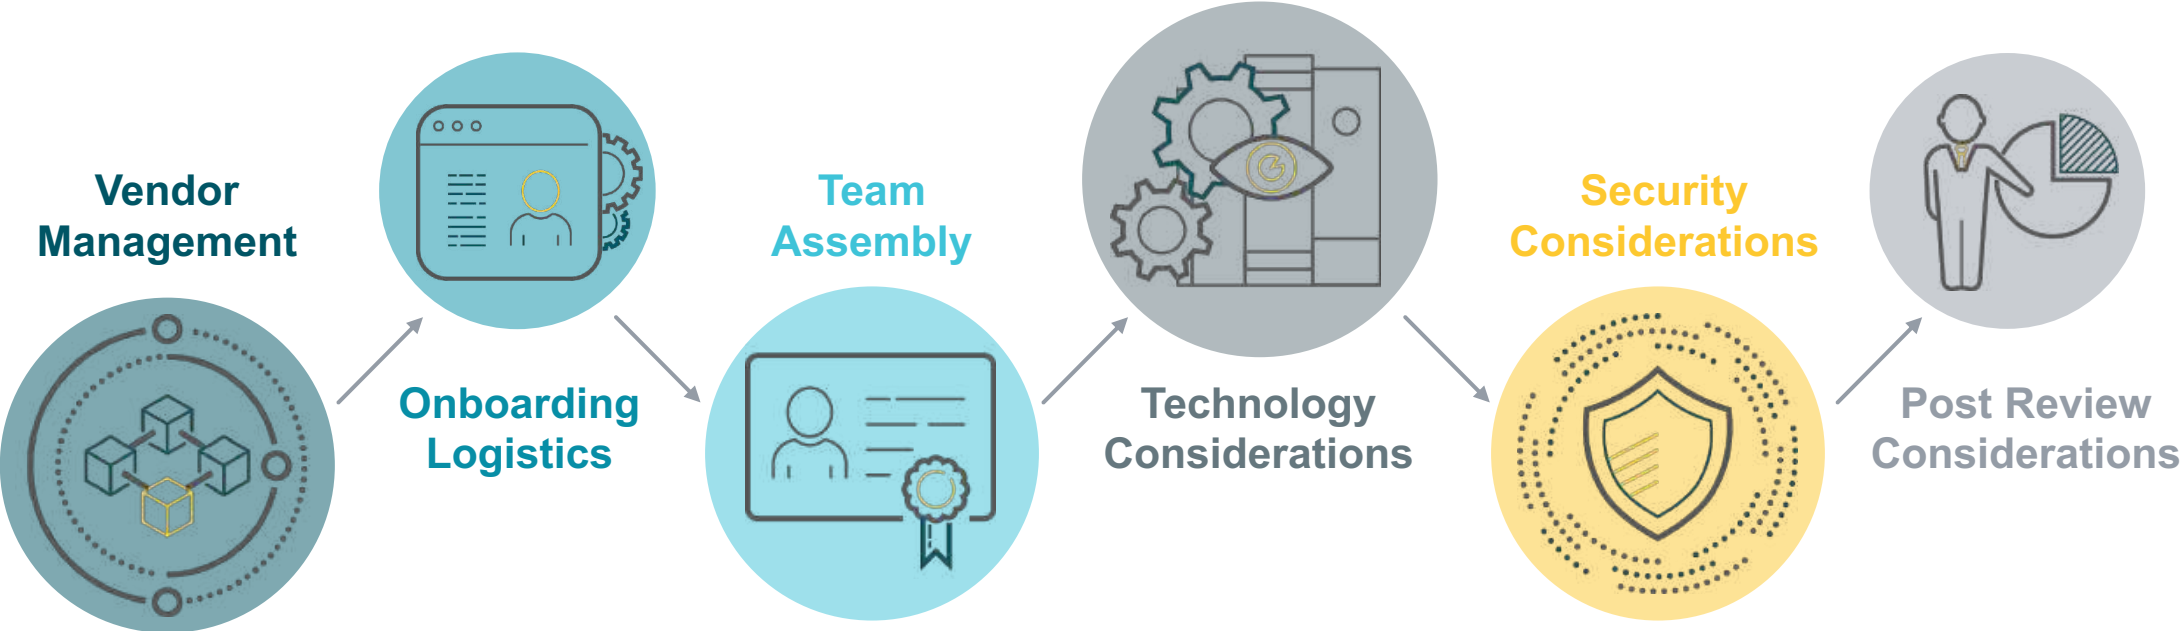

A *secure remote review* is the conduct of a legal document review project with virtual teams operating from remote locations and supported by a secure infrastructure. When properly implemented by a proven and experienced provider, this approach to review increases the quality and speed of reviews while removing many of the safety risks associated with group gatherings. It also, in most cases, can be delivered at lower costs than traditional on-premise reviews.

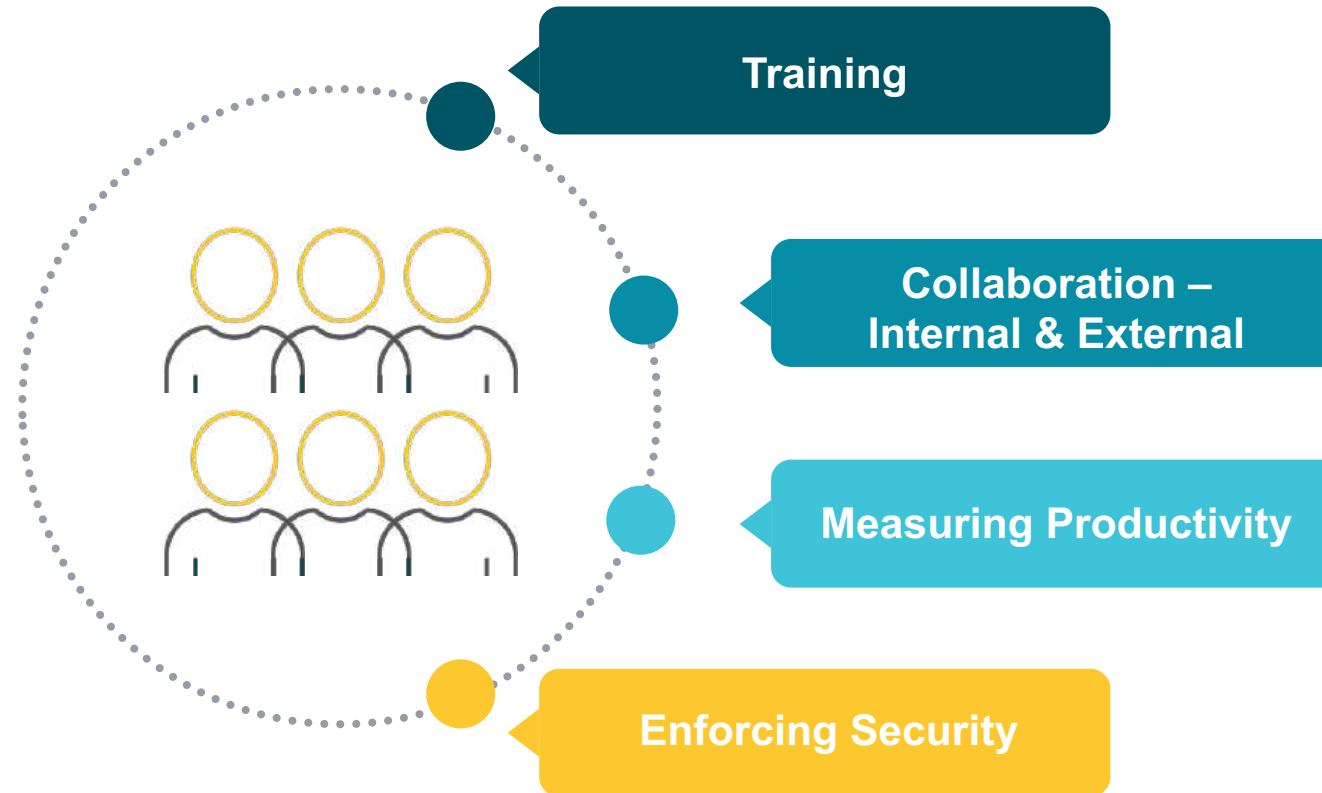

# Factors Leading to Service Change

# Have a New Project?

# Managing and Collaborating with Teams and Clients

# Security and Confidentiality

**Matter Specific  
Infrastructure**

**Physical Security**

**Human End-Point  
Security**

**Biometrics**

**Data Privacy &  
Compliance**

**Infosec Risk  
Management**

Secure Remote Review 3.0 Security Enhancements

**ReviewRight Virtual** helps organizations conducting remote review to **significantly reduce cybersecurity threats** with a new portfolio of 3.0 security enhancements, offering a layered approach to review security, ensuring access to a tailored set of features for remote review requirements.

Security Enhancement customizable packages ensure the appropriate level of security for:

- Specific Policy
- Privacy
- Project Needs

For those needing the most secure protections, the elite level uses revolutionary biometric AI technology and features the latest in webcam identity verification technology, including the detection of unauthorized users/objects (cameras/phones) and tracking of the user's movements and focus. All three levels (Silver, Gold, Platinum) ensure connection, communication and compliance with the most stringent legal and regulatory security and privacy requirements.
