# nPower® Corporate Compliance Solutions

An Overview of HaystackID's Enterprise Managed Solutions nPower Program

HAYSTACK™

## nPower<sup>®</sup> Corporate Compliance Solutions

Using the latest technology, HaystackID's experts empower organizations to categorize, remediate, migrate, and protect their sensitive data. Knowing where all sensitive data resides and how the data is stored and classified is an important compliance requirement. If you don't know the type of PII and sensitive IP data you have and how it's shared, processed, and stored, it is difficult to know if you are complying with privacy regulations and protecting your sensitive IP.

Benefits:

- Ability to demonstrate due diligence and evidence of compliance.
- Improvement of institutional transparency and individual awareness that data management best practices are being followed.
- Improvement of operational efficiencies to minimize the excessive and unnecessary collection, use, retention, and disclosure of personal information and sensitive IP, and perhaps identify simpler and less costly solutions at the start.
- Better protect sensitive corporate IP from unauthorized use or disclosure.

## Data Mapping and Inventory

Data mapping often referred to as data inventory is the starting point for all questions surrounding compliance to data privacy. The HaystackID data mapping team will help classify your applicable data by type, sensitivity, risk, and regulatory obligations for retention, data correction, migration, and remediation. A data map tracks metadata about where data resides, how it is used, for what purposes, and who owns and has access to it. Unlike a single-purpose ESI map used solely for discovery, general data maps integrate legal, compliance, privacy and IT attributes along with a record retention schedule into a single database – providing one centralized place to capture and link record types and their repositories.

Benefits:

- Identify data source(s)
- Know what PII and sensitive IP you have
- Know the location of sensitive data
- Know who has access to it
- Know how it moves through and out of the organization
- Know what data you are collecting
- Know the purpose of the data
- Know how data is handled and stored
- Know if data retention requirements are being followed

HaystackID will help answer these questions and gain full visibility over the flow of sensitive data through your organization and meet the requirement to maintain a record of processing activities under Article 30 of the EU GDPR and applicable US state and federal privacy laws.

## Data Classifications

HaystackID will assist an organization to classify data as part of the mapping project. Depending on your requirements, we can build data classification tags according to type, sensitivity, and value. Proper classification helps an organization understand the value of its data, determine whether the data is at risk, and implement controls to mitigate risks. Data classification also helps an organization comply with relevant industry-specific regulatory mandates such as SOX, HIPAA, PCI DSS, and GDPR.

Common data classification:

- **PII:** Non-sensitive PII, Sensitive PII, Non PII
- **GDPR:** Special category personal data, Personal data, Non-personal data
- **HIPAA:** Critical, Restricted, Public
- **ISO 27001:** Confidential, Restricted, Internal use, Public
- **U.S. Government:** Top secret, Secret, Confidential, Sensitive but unclassified, Unclassified

Data classification by sensitivity levels:

- **Restricted:** Disclosure could cause severe harm to individuals and/or the company, including exposure to criminal and civil liability. Has the most stringent legal or regulatory requirements and requires the most prescriptive security controls. Legal and/or compliance regime may require assessment or certification by an external, third party.
- **High:** Disclosure could cause significant harm to individuals and/or the company, including exposure to criminal and civil liability. Usually subject to legal and regulatory requirements due to data that is individually identifiable, highly sensitive, and/or confidential.
- **Moderate:** Disclosure could cause limited harm to individuals and/or the company with some risk of civil liability. It may be subject to contractual agreements or regulatory compliance or is individually identifiable, confidential, and/or proprietary.

GDPR and new state privacy laws require an additional data classification layer for data processing, purpose, and privacy.

- **Data Processing (consent):** New and evolving data privacy regulations require individuals' consent for how organizations use their private data.
- **Purpose (access):** GDPR requires organizations that process EU personal data to clarify the purposes for which they are collecting data. As a result, companies now have to manage their data according to what purpose or purposes it serves within their organizations.
- **Privacy (compliance):** Both GDPR and new US state laws require more advanced data classification schemas.

## Data Migration

HaystackID provides a comprehensive evaluation of the current data environment and migration goals to create a detailed migration plan, data clean-up, and custom workflow.

Benefits:

- Create a defensible data migration and disposition plan.
- Identify legacy data (i.e., stored data with no business value).
- Migrate legacy data to secure cloud storage.
- Deduplicate, index, and categorize unstructured data.
- Provide secure access to the legacy data for search and analysis.
- Identify document with business, compliance, or discovery value.
- Dispose of documents with no continuing business value or legal obligation to preserve.

## Data Remediation

We provide a comprehensive evaluation of your enterprise data environment to create a detailed remediation plan including any licensing, configuration, deployment strategy, system launch, and custom workflow.

Benefits:

- Create a repeatable and defensible data remediation process.
- Index large archive repositories in place rapidly and bypass old broken indexes and servers to eliminate archive system bottlenecks.
- Visualize the contents of your data using categories such as age, size, file type, and more.
- Make informed decisions about your data.
- Eliminate duplicate, outdated, and trivial data and identify high-value information.
- Index terabytes of data per day.
- Achieve significant savings and greatly reduce data risk.

## Conclusion

The mapping and classification of data is critical to understanding the data landscape of your enterprise. By understanding where sensitive data is located across an enterprise, HaystackID can mitigate your data risk footprint. HaystackID's data mapping and classification delivers this insight with a consistent process that identifies and tags all sensitive information in structured and unstructured forms across your enterprise. Together, data mapping, classification, migration, and remediation will make data more secure by providing the critical first step in a comprehensive data privacy and security program.
