

FACT SHEET

nPower® Data Mapping and Inventory

An Overview of HaystackID's Enterprise Managed Solutions nPower Program

HAYSTACK™

nPower[®] Corporate Compliance Solutions

Using the latest technology, HaystackID's experts empower organizations to categorize, remediate, migrate, and protect their sensitive data. Knowing where all sensitive data resides and how the data is stored and classified is an important compliance requirement. If you don't know the type of PII and sensitive IP data you have and how it's shared, processed, and stored, it is difficult to know if you are complying with privacy regulations and protecting your sensitive IP.

Benefits:

- Ability to demonstrate due diligence and evidence of compliance.
- Improvement of institutional transparency and individual awareness that data management best practices are being followed.
- Improvement of operational efficiencies to minimize the excessive and unnecessary collection, use, retention, and disclosure of personal information and sensitive IP, and perhaps identify simpler and less costly solutions at the start.
- Better protect sensitive corporate IP from unauthorized use or disclosure.

nPower® Data Mapping and Inventory

Data mapping often referred to as data inventory is the starting point for all questions surrounding compliance to data privacy. The HaystackID data mapping team will help classify your applicable data by type, sensitivity, risk, and regulatory obligations for retention, data correction, migration, and remediation. A data map tracks metadata about where data resides, how it is used, for what purposes, and who owns and has access to it. Unlike a single-purpose ESI map used solely for discovery, general data maps integrate legal, compliance, privacy and IT attributes along with a record retention schedule into a single database – providing one centralized place to capture and link record types and their repositories.

Benefits:

- Identify data source(s).
- Know what PII and sensitive IP you have.
- Know the location of sensitive data.
- Know who has access to it.
- Know how it moves through and out of the organization.
- Know what data you are collecting.
- Know the purpose of the data.
- Know how data is handled and stored.
- Know if data retention requirements are being followed.

HaystackID will help answer these questions and gain full visibility over the flow of sensitive data through your organization and meet the requirement to maintain a record of processing activities under Article 30 of the EU GDPR and applicable US state and federal privacy laws.

Conclusion

The mapping and classification of data is critical to understanding the data landscape of your enterprise. By understanding where sensitive data is located across an enterprise, HaystackID can mitigate your data risk footprint. HaystackID's data mapping and classification delivers this insight with a consistent process that identifies and tags all sensitive information in structured and unstructured forms across your enterprise. Together, data mapping, classification, migration, and remediation will make data more secure by providing the critical first step in a comprehensive data privacy and security program.
