

CaseBot™

Agentic Case Analysis and Expert-Built Workflows

CaseBot lets legal teams ask natural-language questions of their case file or run expert-built Specialized Skill Agents for structured analysis. Using agentic retrieval, it connects evidence across documents, refines its searches as new facts emerge, and produces cited findings showing what the record establishes, what conflicts, and what remains unresolved.

EXPERT-BUILT SPECIALIZED SKILL AGENTS

Fact Development

Fact Narrative

An issue-organized account of what the record establishes, including supporting evidence, conflicts, and gaps.

Chronology

A cited sequence of events for a matter, topic, person, or issue.

Entity Map

The key people and organizations in the record, including their roles and connections.

Hot Document Finder

The documents most likely to accelerate case understanding, ranked by analytical significance.

Case Preparation and Validation

Deposition Kit

Witness-specific facts, key documents, contradictions, and areas for examination.

Claim Analysis

Evidence supporting and contradicting an allegation, including issues the record does not resolve.

Request Analysis

Discovery requests broken into discrete elements, with candidate responsive documents and identified gaps.

Record Check

Statements tested against the documentary record and classified as supported, contradicted, mixed, or unsupported.

WHY IT WORKS

- **Evidence You Can Examine**

Each agent produces an exportable PDF with structured findings, citations, and supporting evidence. Conflicts and gaps remain clearly identified.

- **Runs Where Your Case Data Lives**

CaseBot operates securely within your eDiscovery AI® or Relativity workspaces, allowing analysis to occur where your case data already lives.

- **Hours or Days of Effort, in Minutes**

CaseBot produces cited chronologies, fact narratives, deposition kits, and other substantive analyses in minutes, with the supporting evidence attached.
